Freescale Semiconductor, Inc.

Release Notes

Processor Expert for Kinetis 3.0.1 Release Notes

1 Overview

Processor Expert for Kinetis is a rapid application design tool for Freescale Kinetis devices. It combines easy-to-use component-based application creation with an expert knowledge system. The tool can generate code for IAR ARM C Compiler, Keil ARM C/C++ Compiler or GNU C Compiler.

This update provides an additional content for Processor Expert for Kinetis 3.0.0

This is an incremental update of Processor Expert for Kinetis 3.0.0. You need to have Processor Expert for Kinetis 3.0.0 installed in order to be able to apply this update.

Contents

2 Installation instructions

- 1. Run KDS 3.0.0 / Eclipse
- 2. Go to the main menu Help > Install New Software...
- 3. Add a new install site using the Add... button
- 4. Type name of the install site into the Name field (e.g. PEx for Kinetis 3.0.1).
- 5. Click on the Archive... button and find the PEx for Kinetis 3.0.1.zip.
- 6. Select the Processor Expert for Kinetis 3.0.1 item (Group items by category option has to be enabled).
- 7. Continue with the wizard. Accept the license agreement during the installation process.
- 8. Restart Eclipse.

3 Target system configurations

This product has been tested on the following system configurations:

3.1 Operating Systems

- Windows 7 32-bit, 64-bit
- Windows 8 64-bit
- Linux Ubuntu 14.04 64-bit
- RHEL 6.2 64-bit
- Linux CentOS 6.4 64-bit
- Mac OS X 10.10.3 Yosemite

3.2 Eclipse versions

- 3.7 (Indigo)
- 4.2 (Juno)
- 4.3 (Kepler)
- 4.4 (Luna)

3.3 Third party Integrated Development Environments

- Atollic True Studio 5.3
- Emprog ThunderBench C/C++ for ARM Cortex 3.70

3.4 Java Runtime Environment versions

- 1.7
- 1.8

4 Supported Compilers and Toolchains

- GNU C Compiler
- IAR ARM C Compiler
- Keil ARM C/C++ Compiler
- GNU ARM Eclipse Plug-ins

5 Product Contents

5.1 Supported Boards

- FRDM-K22F
- FRDM-K64F
- FRDM-KL46Z
- TWR-K22F120M
- TWR-K60D100M
- TWR-K64F120M
- TWR-KV10Z32
- TWR-KV31F120M

5.2 Supported Processors

5.2.1 Kinetis K Processor Components

- MK10DN128xxx5 MK10DN128VLH5, MK10DN128VMP5, MK10DN128VFT5, MK10DN128VLF5, MK10DN128VFM5
- MK10DN32xxx5 MK10DN32VLH5, MK10DN32VMP5, MK10DN32VFT5, MK10DN32VLF5, MK10DN32VFM5
- MK10DN512xxx10 MK10DN512VLQ10, MK10DN512VMD10, MK10DN512VMC10, MK10DN512VLL10, MK10DN512VLK10

6 Processor Expert directory overview

The ProcessorExpert files and folders are located in the eclipse folder of your Eclipse IDE:

eclipse\ProcessorExpert

There are the following files and subfolders:

| Folder Name | Description | |
|-------------------------------------------------------|-------------------------------------------------------------|--|
| Beans | Legacy embedded component definitions | |
| Config | Processor Expert and New Project Wizard configuration files | |
| CPUs | Legacy processor components folder | |
| DOCs | Items for generated online help | |
| Drivers | Legacy embedded component driver scripts | |
| Help | User documentation | |
| lib | Libraries | |
| licenses | Licenses of used third party SW components | |
| Repositories | Predefined component repositories | |
| File Name | Description | |
| license.htm | End User License Agreement | |
| PEx_for_Kinetis_3.0.0 _Release_Notes.pdf | This document | |
| SW-Content-Register- PEx-for-Kinetis- 3.0.0.txt | Software Content Register | |

7 Known Problems and Limitations

| ID | Description | Workaround |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| - | Low Eclipse Java heap limit | Open file {KDS}\eclipse\kinetis-design-studio.ini and find option -Xmx. By default the option is set to 512MB (-Xmx512m). Increase the amount to 768MB, e.g. change the option to -Xmx768m, save the file and restart KDS. It is not recommended to set maximum heap size over 1GB. Even value -Xmx1024m may cause KDS will not start on some older computers, because Java verifies the memory is available during startup even it is not needed yet. |
| PEXCORE -1163 | Timing dialog clock configuration validation can't be disabled | Remove conflict between clock configuration and component timing settings. |
| | In some cases, when specific clock configuration settings are in conflict with settings of particular component which uses timing dialog a false error message is showed in the timing dialog even if the clock configuration causing the error is disabled for the component. | |
| PEXCORE -1144 | In PinSetings custom view an Undo and Redo commands (Ctrl + Z and Ctrl + Y) don't work properly for renamed pins. If pin is renamed and Undo is applied all previous changes made in PinSettings are lost and Redo command restores only last changed pin name. | Change pin names manually. |
| PEXCORE -1136 | Processor Expert in Atollic True Studio: Empty toolchain settings in project created with Kinetis SDK and Processor expert disabled | Set up the toolchain manually. |
| PEXMCU- 2378 | Init_12S component - cannot configure "Serial master clock pin" on the MK22FN512 device. | In the component inspector of the Init_I2S component, open the context menu of the Pin property in the Serial Master clock pin group and select "Enable Automatic". The selection of the pin is cleared and an error is reported (no pin selected). Open Component Inspector of the PinSettings, select Collapsed View Mode, I2S tab and select the required pin in the "I2S0 > MCLK - Master clock property". The pin is selected and properly routed and the selected pin is also displayed in the Pin property in the Init_I2S component. |

| PEXMCU- 2371 | Incorrect linker flag s conversion from SDK KDS 3.0 | 1.1 to SDK 1.2 in | Turn off the "Use newlib-nano" checkbox in Project Properties -> C/C++ Build -> Settings -> Tool Settings -> Cross ARM C++ Linker -> Miscellaneous panel. |
|-----------------|---------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | You would face the formula you built a KSDK+PFKSDK 1.1, upgraded Assistant and switche | Ex project based on by the KDS Upgrad | |
| | arm-none-eabi-g+d:/freescale/kdsolchain/bin//leabi/4.8.4//eabi/lib/nano.sprename spec 'lindefined spec 'na | _2.9.0402_rc3/ ib/gcc/arm-nor ///arm-nor ecs: attempt t k' to already | to e- e- |
| PEXMCU- | Processor Expert in A | tollic True Studio: | Follow these steps after the Processor Expert code generation action: |
| 2234 | A Processor Expert li | | be 1. Open Project Properties |
| | successfully built in A and later. | Atollic True Studio | 2. Go to C/C++ General -> Paths and Symbols, select tab "Source Location" |
| | | | 3. Either add Static_Code to the list of folders or remove all entries and add the root folder of the project 4. Build the project |
| | | | 5. In order to remove warnings about duplicated include paths go to the project properties -> C/C++ Build -> |
| | | | Settings, the Tool Settings tab, the Compiler Includes panel and remove duplicated entries. |
| PEXMCU- | Processor Expert in A | tollic True Studio: | After the Processor Expert code generation action go to the project properties -> C/C++ Build -> Settings, the Tool |
| 2234 | reported when building | cated include paths are ing a Processor Expert ue Studio 5.2 and later. | Settings tab, the Compiler Includes panel and remove duplicated entries. |
| KDS-269 | Processor Expert in A | tollic True Studio: | Manually select the correct device part name: |
| | Error messages like these can be reported from the project build process for some processors: | | Open project properties Go to C/C++ Build -> Settings, Page Target Settings verify whether the Microcontroller combo box contain correct MCU part name. If not, manually |
| | Interrupt Servic | | set the correct value. 4. Confirm dialog with OK 5. Clean & Build the project |
| | Selected process support Thumb mo | | c. c.can & Band the project |
| | It is because some Atollic Trues Studio MCU part names doesn't correspond to Processor Expert MCU part names: | | |
| | PEx part name | True Studio part name | |

| | MKW01Z128xxx4 MKW01Z128 | |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| | SKEAZN16xxx2 SKEAZN16xxxx | |
| | SKEAZN32xxx2 SKEAZN32xxxx | |
| | SKEAZN64xxx2 SKEAZN64xxxx | |
| | SKEAZN8xxx4 SKEAZN8xxxx | |
| PEXMCU- 2006 | TSS component does not work out of the box. It even can report errors from the | It is not recommended to use the TSS Library component. It is obsolete and no longer maintained. We recommend to use |
| PEXMCU- 1954 | Processor Expert Code Generation process or form building process for some devices. | a new Freescale Touch library. See more at: http://www.freescale.com/touchsw |
| PEXMCU- | | Some TSS component's problems can be resolved following information in this Freescale Community's thread: |
| 531 | | https://community.freescale.com/message/435546#435546 |
| PEXMCU- 2407 | Enable Processor Expert for existing C project feature: Errors about inability to update the main module are reported from the code generation process when this feature is used for projects configured for the IAR compiler. | Rename or remove the original main module. Processor Expert will generate a new main module with the necessary synchronization marks. |
| PEXMCU- 2441 | Flash_LDD component: the Erase() method doesn't work correctly on devices where there are sectors of different size. The method will use one same size for all sectors and thus it will not work correctly on flash blocks with different size of sector. | Use the EraseBlock() method instead of the Erase() method. |
| PEXMCU- 2511 | Export of Processor Expert projects to uVision doesn't work for some Kinetis. uVision uses wrong MCU IDs for these derivatives. | Change MCU ID in the generated ProjectInfo.xml file, element <deviceid>. For example change <deviceid>MKW01Z128xxx4</deviceid> to <deviceid>MKW01Z128xxx5</deviceid>.</deviceid> |

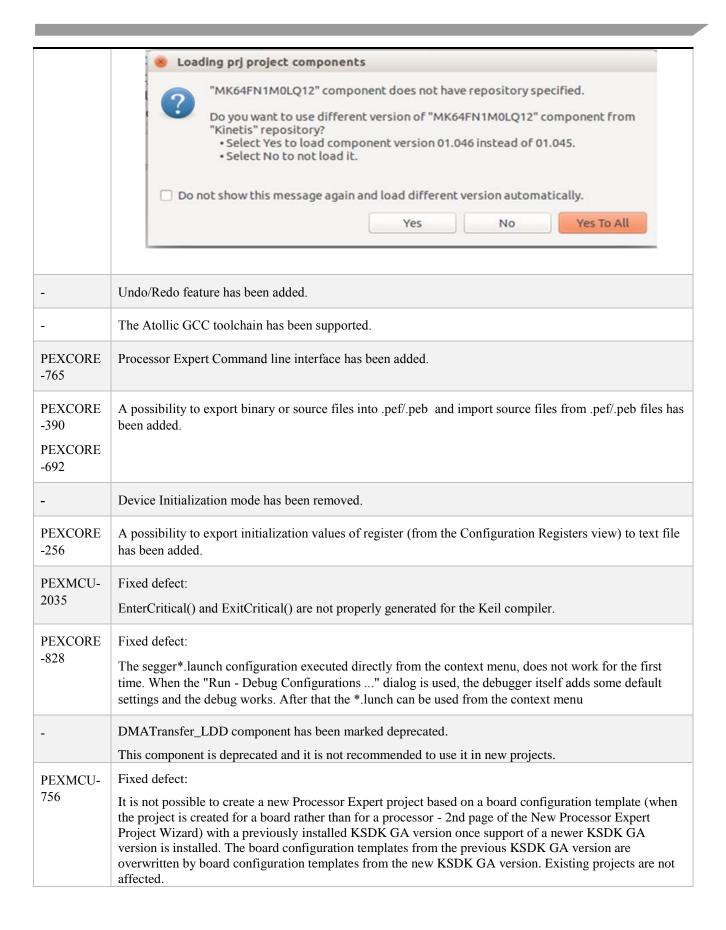

8 Revision history

The table below describes changes of Processor Expert for Kinetis 3.0.1 from Processor Expert for Kinetis 3.0.0.

| Processor Expert | | |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ID | Description | |
| - | CMSIS header files have been updated to version 4.10. These headers are included in KDS project when both Kinetis SDK and Processor Expert are disabled. | |
| PEXMCU- 2640 | Fixed defect: Debug sessions using a PEMicro debug configuration cannot be launched for some devices due to incorrectly set target device in the debug configuration. | |
| PEXCORE -1012 | Fixed defect: It is not possible to change a compiler in a Processor Expert project in a processor component on the Build option tab when the Component Inspector Classic view is used. | |

The table below describes changes of Processor Expert for Kinetis 3.0.0 from Microcontrollers Driver Suite 10.4.2 from which Processor Expert for Kinetis 3.0.0 has been derived from.

| Processo | Processor Expert | |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ID | Description | |
| - | Component repository model has been used for storing all processor and embedded component. All Processor Expert components are now stored in component repositories. This allows to use component with same name/version, if they are stored in different repository. Reference to the component is stored in the Processor Expert project (.pe file). If the reference is not valid, or not included, Processor Expert will find component automatically and if there are more components or component version does not match, Processor Expert will inform you. All changes are also logged, you can find them in Console view. | |
| | Note: When importing a project created in previous versions of Processor Expert for KDS or Driver Suite user is asked whether to replace components in the project by components from repositories. The components need to be replaced in other to allow those projects to be used in Processor Expert for Kinetis 3.0 | |

| "Enable Processor Expert for existing C project" Wizard doesn't work properly for SDK projects. There is neither a possibility to specify the project the vizard is opened for is the SDK project nor a possibility to specify what SDK should be used for the project. Fixed defect: Projects with SDK meu's cannot be built in IAR Embedded Workbench. Note: IAR Systems company incorporated the new feature to IAR workbench that fetches the type of the CPU from ProjectInfo.xml of the PEx project and defines it as preprocessor symbol for compilation. It is available in EW ARM 7.30.3. FEXMCU- 199 Fixed defect: When the Enable PEx for existing C project feature is used for an existing bare board project the project cannot be compiled. The CAU_LIDD component has been removed. Workaround: Use MMCAU library directly without CAU_LDD component. For more information see the MMCAU library documentation. Fixed defect: Project file paths with parenthesis prevent PEx from generating code. Fixed defect: Prix projects (no SDK) have not correct startup for C++ projects Fixed defect: Init_FTM component does not allow user to select pins on some processors. PEXCORE Fixed defect: It is not possible to debug in flash using the IAR plugin with MK22FN128xxx10. There is typographic error in MCU name which is used by IAR: MK22FN128xx10 -> should be xxx in name (MK22FN128xxx10). Note: IAR Systems company fixed the device name in EWARM-CD-7303-8062. Fixed defect: The CAN_LDD component code doesn't build when using with MQX-Lite. The structure (Name> ThereiceData in the CAN_LDD header file is missing members, like SavedBusOffISRSettings.) Fixed defect: SSI_LDD component gives an error "error: '12S_PDD_PLI_CLK' undeclared'.) Fixed defect: SSI_LDD component gives an error "error: '12S_PDD_PLI_CLK' undeclared'.) Ethernet_LDD: Clock gate of port B is not initialized in the Init() method the component. Then the gating of port B is missing and it is causing a hard fault in component initialization. | | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Projects with SDK mcu's cannot be built in IAR Embedded Workbench. Note: IAR Systems company incorporated the new feature to IAR workbench that fetches the type of the CPU from ProjectInfo.xml of the PEx project and defines it as preprocessor symbol for compilation. It is available in EWARM 7.30.3. PEXMCU- 199 When the Enable PEx for existing C project feature is used for an existing bare board project the project cannot be compiled. - The CAU_LDD component has been removed. Workaround: Use MMCAU library directly without CAU_LDD component. For more information see the MMCAU library documentation. PEXMCU- 1129 Fixed defect: PEx projects (no SDK) have not correct startup for C++ projects PEXMCU- 1782 Init_FTM component does not allow user to select pins on some processors. PEXCORE -534 It is not possible to debug in flash using the IAR plugin with MK22FN128xx10. There is typographic critor in MCU name which is used by IAR: MK22FN128xx10 -> should be xxx in name :MK22FN128xxx10 Note: IAR Systems company fixed the device name in EWARM-CD-7303-8062. PEXMCU- 1276 Tixed defect: The CAN_LDD component code doesn't build when using with MQX-Lite. The structure Name TDeviceData in the CAN_LDD header file is missing members, like SavedBusOffISRSettings. PEXMCU- 2237 DMAChannel_LDD component: IDE stops responding when the 10th DMA channel is added. PEXMCU- 2237 Fixed defect: DMAChannel_LDD component: lDE stops responding when the 10th DMA channel is added. PEXMCU- 2237 Fixed defect: DMAChannel_LDD component: lDE stops responding when the 10th DMA channel is added. PEXMCU- 1276 Fixed defect: DMAChannel_LDD component: lDE stops responding when the 10th DMA channel is added. PEXMCU- 1277 Sixed defect: Effect (LDD: Clock gate of port B is not initialized in the Init() method the component. Then the gating of port B is missing and it is causing a hard fault in component initialization. | - | neither a possibility to specify the project the wizard is opened for is the SDK project nor a possibility to |
| LAR Systems company incorporated the new feature to IAR workbench that fetches the type of the CPU from ProjectInfo.xml of the PEx project and defines it as preprocessor symbol for compilation. It is available in EWARM 7.30.3. PEXMCU-199 Fixed defect: When the Enable PEx for existing C project feature is used for an existing bare board project the project cannot be compiled.
